# How to buy #MHC?

User manual  
**Desktop edition**

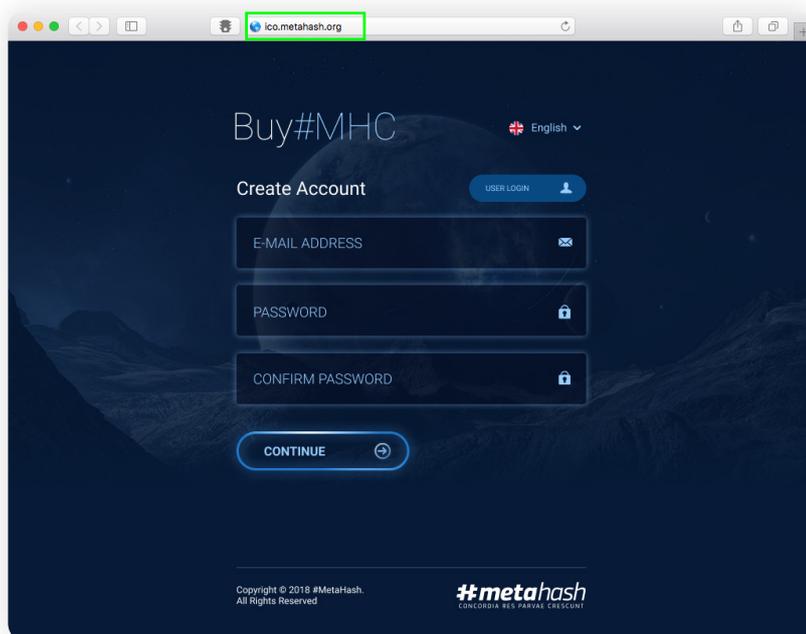

**MetaHash AG,**  
Gartenstrasse 6, 6300 Zug  
Switzerland

Version: 1.2

## How to buy #MHC?

1. You can purchase #MHC on #MetaHash website

Visit our ICO interface at <https://ico.metahash.org>, register or login to your personal ICO account.

The screenshot shows the registration page for Buy#MHC. The browser address bar shows 'ico.metahash.org'. The page title is 'Buy#MHC' with a language dropdown set to 'English'. There are two main options: 'Create Account' and 'USER LOGIN'. The 'Create Account' section has three input fields: 'E-MAIL ADDRESS', 'PASSWORD', and 'CONFIRM PASSWORD', each with an icon (envelope, lock, lock). Below these is a 'CONTINUE' button with a right arrow. At the bottom, there is a copyright notice: 'Copyright © 2018 #MetaHash. All Rights Reserved.' and the #metahash logo.

Please note that you'll need to register first to participate in the ICO. The account you create will be universal through the entire #MetaHash ecosystem

If you have any questions or experiencing software issues please contact us:

 [support@metahash.org](mailto:support@metahash.org)

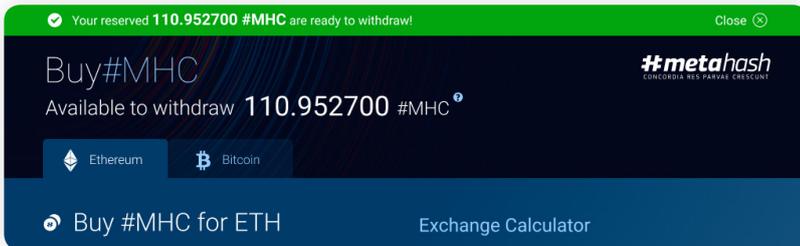

2. After the registration you can start the #MHC reservation procedure. As of now, you can use either ETH or BTC.

The screenshot shows the reservation interface. At the top, it says 'Buy#MHC' and 'Available to withdraw 0.00 #MHC'. There are tabs for 'Ethereum' and 'Bitcoin'. The main section is 'Buy #MHC for ETH'. It includes a note: 'Personal wallets in different currencies were created for you. All funds sent to these addresses will be funded to your account.' Below this is a text box for 'Your personal ETH account' containing the address '0xD93AaF00ba76995b09972bDFe...' with a red bar over the end. There are buttons for 'COPY', 'QR CODE', and 'CHAIN INFO'. To the right is an 'Exchange Calculator' showing 'Exchange rate: 1 #MHC = 0.0000947 ETH'. It has two input fields: 'ETH' with '25' and '#MHC' with '263157.89'. Below the calculator is a 'Transaction monitor' section with a progress indicator and the text 'We are waiting for incoming transaction'.

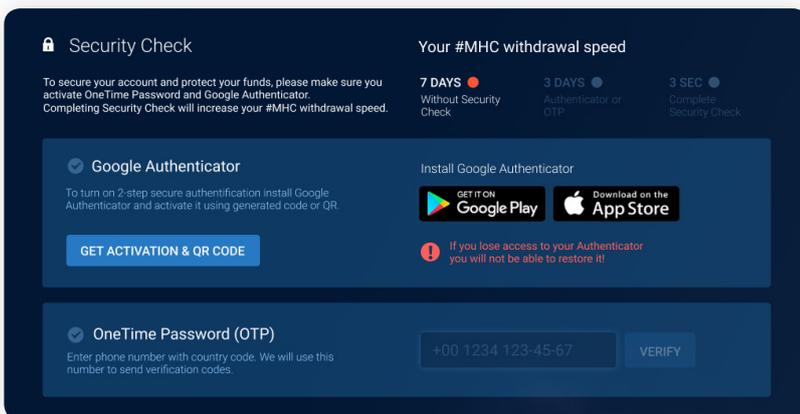

Use the Exchange Calculator (1) to establish the required sum, that you'll transfer to a specially generated **personal wallet address** (2). Use this address with your preferred method of transfer (by scanning a QR code or by simply copying the wallet address).

3. After the cash is transferred to your personal wallet, you will be placed in a queue for #MHC reservation:

After your number comes up in the queue, the amount is reserved:

4. Before transferring #MHC to #MetaWallet we recommend to set up additional methods of account verification:

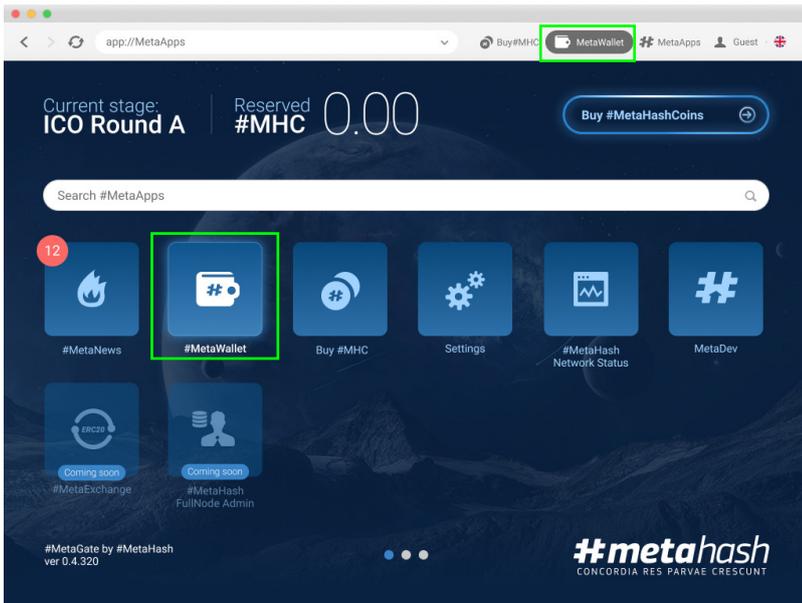

- verification by **phone number**
- verification through **Google Authenticator**

It's required for a speedy transfer.

5. In order to withdraw your #MHC you need to download and install #MetaGate application from our website:  
<https://metagate.metahash.org>

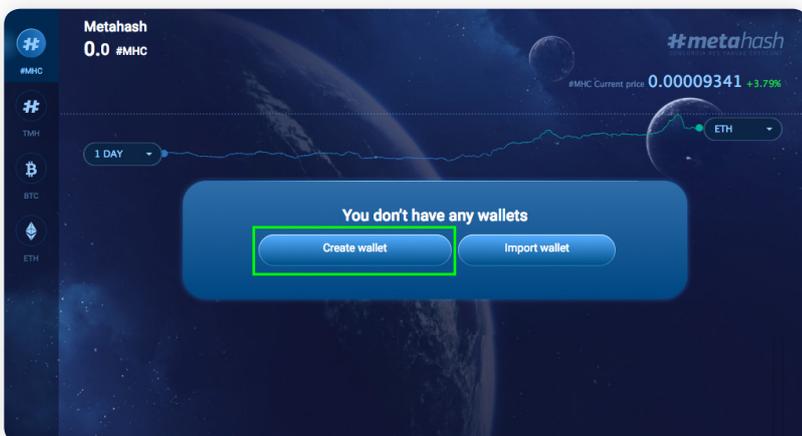

To login to #MetaGate please use your universal account that you already **created during registration process to participate in the ICO** (see [Part 1](#))

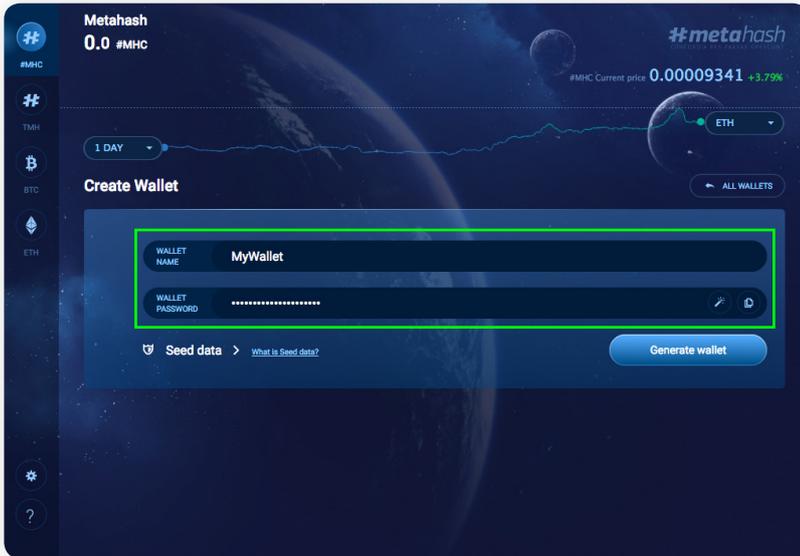

From the stat screen in #MetaGate launch **#MetaWallet app**.

Select **#MetaHash** from the list of available cryptocurrencies

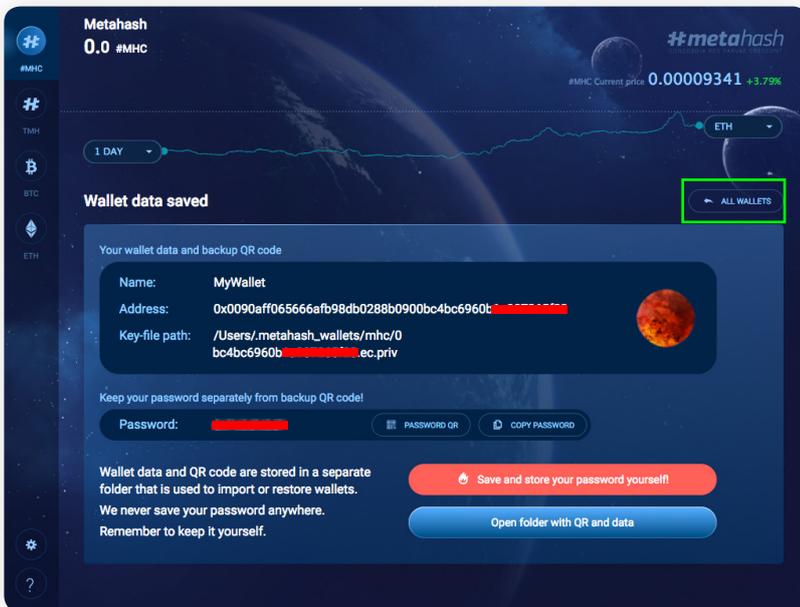

You will be prompted to create or import your #MetaHash wallet. Pick **“Create Wallet”**

Please come up with a name and a password for your wallet

**Remember that you can't restore the password! If you forget or misplace it, the access to your wallet will be lost permanently.**

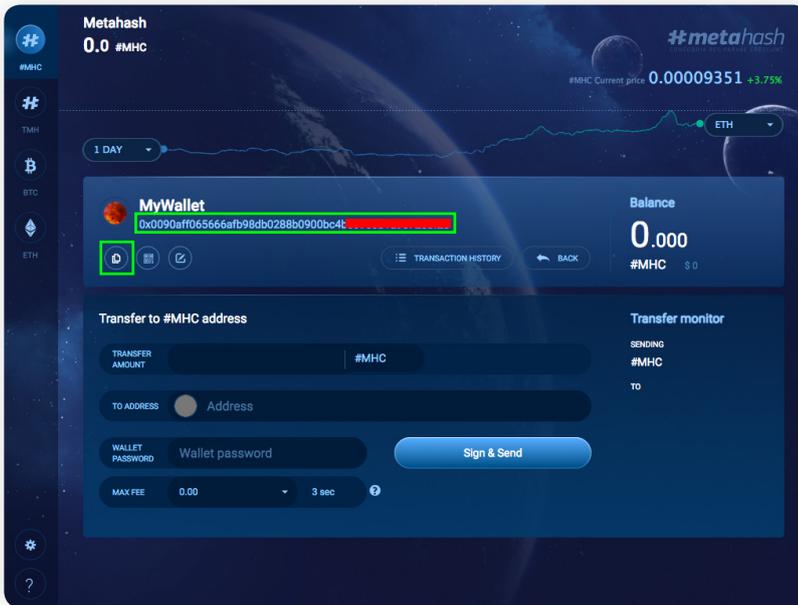

The wallet has been created, now you must **store in a safe place all info** that will help you regain access in case of an emergency.

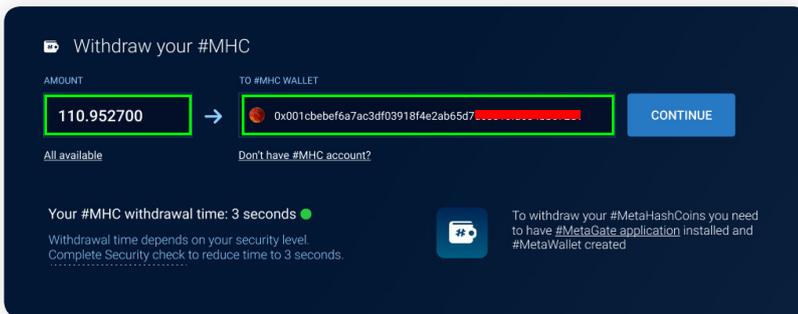

You can now return to the wallet list and open the wallet you created.

## 6. Copy the Wallet address

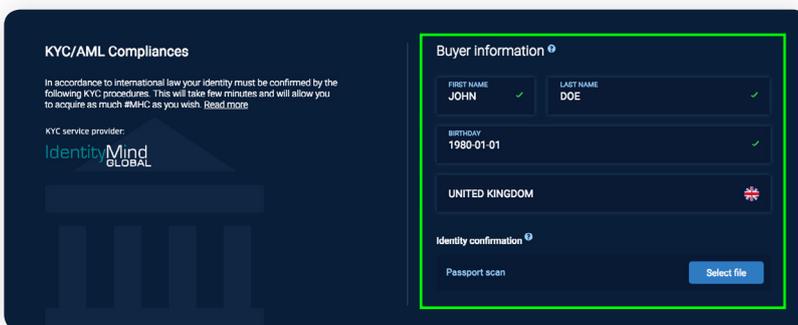

## 7. Switch back to your web browser and ICO interface

Paste your Wallet's address into the required field of the the ICO interface adding the amount of coins you want to transfer.

## 8. After the first transaction out of the ICO account you'll be required to confirm your identity through the KYC procedure, which usually takes around 3 hours.

The identification procedure is conducted by the company Identity Mind worldwide except Switzerland where your identity is verified by the company Eidoo. After you successfully completed the KYC procedure once, #MHC could be transferred to any #MetaWallet with no further identity checks.

IdentityMind  
GLOBAL

## Advises on passing KYC

The KYC procedure is extremely demanding as to the **quality of the uploaded passport image**, so we recommend scanning your passport at the highest possible resolution.

Optimal file size of your scanned document should be **1Mb up to 2.5Mb**. We recommend saving it as **PNG**, but other formats are also accepted: JPEG, TIFF, GIF.

Please make sure your **first and last name** and **citizenship** are exactly the same in the web form as in your document. **Document number should be clearly visible as well.**

## Participation Restrictions

Please be advised that citizens of the following countries **cannot participate in #MetaHash ICO: China, North Korea, Pakistan and Kyrgyzstan.**

**US and Swiss citizens** are required to complete an additional identification procedure to participate **as Accredited Investors.**

If you have any questions or experiencing software issues please contact us:
